

DON'T WAIT FOR A FAILURE: REPLACE KTP600 AND KTP400 PANELS IN TIME

MODERNIZE ON YOUR SCHEDULE AND ENSURE THE LONG-TERM AVAILABILITY OF YOUR EKOBAL WRAPPER.

Many Ekobal wrappers are equipped with Siemens SIMATIC HMI KTP600 or KTP400 operator panels. As these devices have been discontinued by the manufacturer, identical replacement units are no longer available. In the event of a failure, extensive hardware and software modifications may be required, potentially resulting in prolonged downtime.

With the GREIF-VELOX retrofit solution, the replacement can be planned and implemented in advance, helping you avoid unnecessary production interruptions.

Modernize operator panels in time and safeguard production

An unexpected operator panel failure can significantly impact the availability of your system. Since a direct 1:1 replacement is no longer possible for the discontinued KTP600 and KTP400 devices, timely action is essential. Plan your modernization before a failure occurs and avoid unplanned production downtime.

Why you should plan the replacement now?

- Original replacement units are no longer available
- Planned modernization instead of costly system downtime
- Avoid unplanned emergency measures and gain greater planning reliability for maintenance and production
- Integrate future-proof operating and control technology
- Ensure long-term production reliability

Your benefits with the GREIF-VELOX Retrofit

- Increased operational reliability of your system
- Long-term availability of spare parts
- Future-proof hardware and software platform
- Complete solution from a single source
- Fast support from GREIF-VELOX

SPECIAL OFFER

(valid until your equipment is permanently decommissioned)

from €8,000*

* The final price depends on the system configuration and the scope of the required modifications.

Complete Retrofit package for Ekobal wrappers

GREIF-VELOX handles the complete replacement of your operator panels, including all required hardware and software modifications.

Scope of services

- ✓ New HMI operator panel
- ✓ Hardware modifications
- ✓ Software migration and adaptation
- ✓ Professional installation
- ✓ On-site commissioning
- ✓ Final functional testing
- ✓ Documentation
- ✓ Service and support from GREIF-VELOX

Plan your retrofit smart: We are happy to advise you

Find out now whether your system requires a retrofit. Our service team will assess your installed operator panels and provide an individual retrofit proposal tailored to your system.

For quick identification, please have your system number ready.
